Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at http://about.jstor.org/participate-jstor/individuals/early-journal-content.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

TABLE OF CONTENTS

VOLUME 5 1904

PAGES

BLICHFELDT, H. F., of Stanford University, Cal. On the order of linear homogeneous groups (second paper) 310–325

———— A theorem concerning the invariants of linear homogeneous groups, with some applications to substitution groups 461–466

BLISS, G. A., of Columbia, Mo. An existence theorem for a differential equation of the second order, with an application to the calculus of variations 113–125

———— Sufficient condition for a minimum with respect to one-sided variations 477–492

BROWN, E. W., of Haverford, Pa. On the smaller perturbations of the lunar arguments 279–287

COLE, F. N., of New York, N. Y. The groups of order p^3q^β . . 214–219

DICKSON, L. E., of Chicago, Ill. The subgroups of order a power of 2 of the simple quinary orthogonal groups in the Galois field of order $p^n = 8l \pm 3$ 1– 38

———— Determination of all the subgroups of the known simple group of order 25920 126–166

EISENHART, L. P., of Princeton, N. J. Three particular systems of lines on a surface 421–437

EPSTEEN, S., of Chicago, Ill. On the definition of reducible hypercomplex number systems 105–109

FINDLAY, W., of New York, N. Y. The Sylow subgroups of the symmetric group 263–278

FRÉCHET, M., of Paris, France. Sur les opérations linéaires . . 493–499

GOURSAT, E., of Paris, France. A simple proof of a theorem in the calculus of variations. (Extract from a letter to Mr. W. F. Osgood.) 110–112

HASKINS, C. N., of Ithaca, N. Y. On the invariants of quadratic differential forms, II. 167–192

HUN, J. G., of Princeton, N. J. On certain invariants of two triangles 39– 55

HUNTINGTON, E. V., of Cambridge, Mass. Sets of independent postulates for the algebra of logic 288–309

HUTCHINSON, J. I., of Ithaca, N. Y. On the automorphic functions of the group (0, 3; 2, 6, 6) 447–460

PAGES

KASNER, E., of New York, N. Y. Isothermal systems of geodesics. 56– 60

LOEWY, A., of Freiburg, i. B., Germany. Zur Gruppentheorie mit Anwendungen auf die Theorie der linearen homogenen Differentialgleichungen 61–80

MACAULAY, F. S., of London, England. On a method of dealing with the intersections of plane curves. 385–410

MASON, MAX, of New Haven, Conn. Green's theorem and Green's functions for certain systems of differential equations . . . 220–225

MORLEY, F., of Baltimore, Md. On the geometry whose element is the 3-point of a plane. 467–476

PEIRCE, J. M., of Cambridge, Mass. On certain complete systems of quaternion expressions, and on the removal of metric limitations from the calculus of quaternions 411–420

RIETZ, H. L., of Urbana, Ill. On groups in which certain commutative operations are conjugate 500–508

ROE, E. D., Jr., of Syracuse, N. Y. On the coefficients in the product of an alternant and a symmetric function 193–213

SHAW, J. B., of Decatur, Ill. Algebras defined by finite groups . 326–342

TABER, H., of Worcester, Mass. On hypercomplex number systems (first paper). 509–548

VAN VLECK, E. B., of Middletown, Conn. The convergence of algebraic continued fractions whose coefficients have limiting values. 253–262

VEBLEN, O., of Chicago, Ill. A system of axioms for geometry . 343–384

WILCZYNSKI, E. J., of Berkeley, Cal. Studies in the general theory of ruled surfaces 226–252

———— On ruled surfaces whose flecnode curve intersects every generator in two coincident points. 438–446

YOUNG, J. W., of Evanston, Ill. On the group of the sign $(0, 3; 2, 4, \infty)$ and the functions belonging to it. 81–104

Notes and errata: volumes 1, 3, 4, 5 549–552
